

# Eco-Educational Program Offer for Kindergartens

**Age levels:** from 4 to 6 years

**Time Frame:** 45 minutes (indoor at your school)

**Goal:** To enable children to understand the importance of nature protection through sense-perception, kinetic and other activities.

## PROGRAM OFFER:

### FOREST FAIRY

In every forest and in each tree there lives a fairy. Today one of these fairies will come to the class and tell the children the true story about trees as living beings. She will tell and show the children how trees smell, sound and that they provide a home for animals. At the very end of this story, the whole class will play some musical instruments made from natural materials which the fairy brings along, because believe it or not, in the forest the trees play their own music.

### BACK TO PREHISTORIC WORLD

Children will have a look into prehistoric past to solve together the mystery of fossil creation. What are fossils, how are they created and which fossils do we know? In a game of little adventurers the children will discover and colour up their own fossil imitations made from plaster.

### THE SECRETS OF MEDICAL HERBS

Using stories of animals and plants that live on meadows, children will learn about common herbs and learn how to distinguish these herbs by their smell and taste. They will also learn how herbs help us treat certain illnesses.

### WASTE SEPARATION IN MAGICAL LAND OAKIES

Through the story about the magical land Oakies and the negligent Shabbey children will learn how to handle correctly household waste and what second-use materials can be made from "ordinary" waste. To ensure that they can change behaviour of people similar to Shabbey, the children will get a beautiful game "pexeso" to play it at home or with their friends.

### THE STORY OF UNCLE BEN

Uncle Ben tells us a story about his village, which is dirty, smelly and where people and animals do not like to live. Shall children help uncle Ben to renew (rebuild) his village so that life and happiness can return? Let them talk today about what each of them can do...

### PRICE:

3 EUR per pupil, minimum number of pupils is 10 per a 45-minute lecture. Price includes guides and props.

**We will be most delighted to adapt our offer according to your individual needs.**
